

Autism VS ADHD 自闭症和多动症

TIPS:

Signs of concern for Autism:

- little ability to engage with peers
- difficulties with communication regardless of family language
- prefer to be on their own
- different body movements, like spinning, jumping, flapping

小贴士:

关于自闭症的迹象

- 缺少与同龄人参与的能力
- 用家庭母语交流障碍
- 愿意更多自己玩耍
- 有各种的身体动作，比如旋转，跳跃，扑倒

Signs of ADHD (hyperactivity)

- able to communicate with words
- have trouble focusing or remembering

多动症的迹象（过度活跃）:

- 能够用语言交流
- 集中注意力或者记忆力有困难
